

Scenario based learning

A) How will you achieve this in AI?

Answer: The following automation is designed to achieve the result.

Step1: Employee should update the resignation in their respective ERP.

Step2: Notification sent to reporting manager with employee's last date of work.

Step3: Reporting manager will notify the HR Manager.

Step4: New hiring process initiated and hired. KT will be done to the new hire.

Step 5: If new hire deadline is not met, the existing employees will be shared the work to finish the task.

B) Find out the three stage of problem Identification.

Answer: Time series

Supervised Learning

Classification

C)Name the project.

Answer: Employee Exit Process

D)Create the dummy Dataset.

Input	Output
Resign	New hiring
Date & Time	Splitting the work among existing employee
